The Danish *Algerian Sea Passes*, 1747-1838: An Example of Extraterritorial Production of *Human Security*

Erik Gøbel*

Abstract: »Die „Algerischen Seepässe“ Dänemarks, 1747-1838: Ein Beispiel der extraterritorialen Produktion humaner Sicherheit«. This paper discusses the Danish “Algerian sea passes”, 1747-1838, as an example of production of “Human Security”. Since the seventeenth century, privateers from the Barbary States (i.e. Morocco, Algiers, Tunisia, and Tripoli) had seized ships under the Danish flag and captured the sailors. Often they were ransomed, in the beginning by family members and from 1715 by the Slave Fund in Copenhagen. Beginning in 1746, however, Denmark signed peace treaties with the Barbary States. Thereafter Danish shipmasters would carry so-called Algerian sea passes which secured safe passage. The system worked well until after 1830 when the privateering business stopped. The Danish authorities issued 28,000 Algerian sea passes which produced specifically “Human Security” for hundreds of thousands of Danish sailors. Insights into this system may challenge our notion of the so-called “Westphalian System”.

Keywords: Security at sea, maritime insurance, sea pass, Slave Fund, Barbary States, privateering, Danish maritime history.

Introduction

The concept of “human security” as it was formulated in 1994 by the United Nations Development Report is a very visible reflection of a marked change of the meaning of “security” in our contemporary world.¹ The older, allegedly narrower focus on the military security of nation-states within this field has been more and more relativized and the security of the individual, dubbed “human security”, has become the ultimate goal, at least within the discourse.² Whereas in the time of the Cold War, a “production of security” meant an easing of tensions between the blocs, nowadays an aspired “production of human security” can serve as justification to infringe on the sovereignty of nation-states.³ One of the qualitatively “new” elements is said to be the de-

territorialization of “security production”, often constructed in opposition to a state-based “Westphalian System”.⁴

This dichotomical construction shall serve here as the starting point for an essay on a specific mode of “production of human security” during the Early Modern Era. If there was a given “Westphalian System”, in which clearly defined rules and demarcations ensured stability and security⁵, it may be of interest to look at the fringes of it in order to see more clearly its peculiarities and the weaknesses of such a branding. Serving as an example here is the Kingdom of Denmark, a medium-sized power within Early Modern Europe and the Northern African regencies. These were the so-called Barbary States in Northern Africa – Morocco, Tunisia, Tripoli, and especially Algiers, all of which threatened the most basic security of the Danish⁶ King’s subjects in two ways, as they both raided Danish coasts and seized Danish ships.⁷ Any territorially based mode of securing the King’s subjects was impossible since most of the danger lurked in international waters, i.e. was extraterritorial. Therefore the ways in which a classical European power reacted towards this difficult and often unsolvable threat may give us profound insights into the underlying systems of both sides at large. In this essay the intention is to specify in detail what this danger meant, where it lurked and how it was met. The aim of the following is to give a complex example of extraterritorial “production of human security” during the Early Modern Era and thereby enrich our understanding of issues of security production for individuals in a time and international system which is perhaps too narrowly simply called “Westphalian”.

The Threat to “Human Security”

The Danish King’s subjects living in the islands of the North Atlantic were the ones most threatened by the corsairs from Northern Africa. The corsairs sent, from the sixteenth century, sailing expeditions to the Faroe Islands and Iceland among other places where they went ashore, plundered, killed, and captured many people whom they took as prisoners to Northern Africa. This kind of terror culminated in the early seventeenth century.

They landed, for instance in 1627, in several places in Iceland and made more than a hundred people captives after having robbed and destroyed the

⁴ An overview and a critical examination of this idea is given in: Bacon 2001.

⁵ It may be remarked that the idea of a “Westphalian” system is not very popular among historians, see e.g.: Duchhardt 1999.

⁶ The Danish Kings ruled over Denmark, Schleswig, Holstein, Southern Sweden (until 1658), Norway, Faroe Islands, and Greenland, as well as small tropical colonies. In this article, “Danish” refers to all of these possessions.

⁷ A general history of Danish shipping can be found in Degn and Gøbel 1997; Feldbæk 1997; and Møller 1998. A history of Danish shipping with special regard to the Barbary States, Algerian sea passes etc. can be found in Gøbel 1982-1983; and in Rheinheimer 2001.

villages. The same year Algerians killed at least thirty-four people and took with them as prisoners 242 inhabitants from the small island of Heimaey off the southern coast of Iceland.⁸ In 1629, they carried off thirty women from the settlement of Hvalba in the Faroe Islands.⁹ The Barbaresques also landed in many other places in Northwest Europe. In 1631, two Barbaresque vessels attacked Baltimore near Cork in Ireland where they took 111 captives, and five years later they went ashore just twelve miles from Bristol and took prisoners; thus 2,000 people were captured and carried away from that region in 1634-1635.¹⁰ Such raids went on for a very long time, as two Tunisian ships cruised in 1817 near the Thames where they seized a vessel from Hamburg and another from Lübeck.¹¹

In order to prevent this odious practice the Danish King sent out men-of-war on several occasions. For instance the 'Lindormen' and the 'Gabriel', in 1638, whose commanders were instructed "to cruise diligently around the Faroe Islands and Iceland in order to prevent the Turks or others from molesting the King's subjects".¹² Again, in 1687, a flotilla of six men-of-war was equipped in order to fight against the Moslems in the North Sea around Helgoland and the Elbe's estuary. But of course the Mediterranean coasts of Spain, France, and Italy were the most endangered by raids from the nearby Barbary States.

Another kind of threat to human security was the fact that vessels from the Barbary Coast often attacked Christian shipping, captured ships and cargoes and made the crew members prisoners in Northern Africa. This had happened since the Middle Ages, but as European trade and shipping increased through the centuries, the Barbaresque problem became more and more serious, also to Danish sailors, shipowners, and merchants.

Danish shipping to the Mediterranean had been very limited before the eighteenth century.¹³ But as time went on the Barbary seizures became a significant problem to ships under the Danish flag in the Mediterranean as well as in the Atlantic off North Africa and the Iberian Peninsula.

Several Danish ships were seized and the eyewitness accounts of that time clearly reflect the fact that the exotic Barbaresques made up a formidable threat to the Christian sailors, who were unable to communicate with them and who were frightened by the hard fate they expected as slaves in the Barbary.

We do have a description of such an encounter at sea.¹⁴ The 'Jomfru Christina', mastered by Hans Thode Gram, departed from its home port Trondheim on 7 September 1769 bound for Lisbon. A month later Cape Finisterre (i.e. the

north-westernmost point of Spain) was sighted, and three days afterwards when the ship was just north of Lisbon, a vessel was sighted to the windward at 2 o'clock in the afternoon.

As it approached we became anxious that it might be a Turkish privateer, but did neither expect it to be an Algerian nor that they had declared war on Denmark. Therefore we had confidence in our Turkish sea pass which we had acquired not long ago. As the other vessel came closer it fired a bow cannon so that the cannonball passed us close to our stern. We had no choice but to clew up our course and heave to as the wind was almost calm. When the other vessel came so close that its crew was able to call us, we were ordered to come onboard the privateer and produce our passport¹⁵ ... Our master went there by the ship's boat manned by four sailors. The four stayed in the boat waiting for the master to return. After having waited for some time, a lot of Turks and Moors came down and took us onboard their vessel. We became very frightened as we thought they would kill us ... Thereupon the Turks took possession of our boat and rowed to our ship. Upon their approach our shipmates heard their strange chattering speech and became aware of the many people, they could not figure out what all this meant. But when they came to our ship it became clear that they were Turks, and they entered the ship like ravenous lions, chased the helmsman away, stroke our Danish colours, and sent our remaining six shipmates down into the ship's boat. Some of the Turks took the captured sailors to their own xebec, while the rest of them took possession of our ship – which they considered as a lawful prize¹⁶.

A week earlier the same privateers had succeeded in taking the 'Rigernes Ønske' of Copenhagen, so the xebec could disembark a total of twenty Danish prisoners in Algiers.

This happened when Algiers had just broken the peace with Denmark, but under normal circumstances the Danes would be allowed to pass without hindrance after having produced their Algerian sea pass.

Before the peace treaties were signed, the Danes often avoided being attacked by demonstrating their will to defend themselves. This was the case, for instance, in 1672 near the Canary Islands when the large armed frigate, the 'Oldenburg', deterred four Moslem privateers from attacking by showing all its cannons and handguns.¹⁷

The Moslems were, however, not definitively illegal pirates. They considered themselves, as did their rulers, as participants in a kind of holy war against the infidels – and thereby qualified as privateers. A privateer (or corsair) was as a rule a private warship authorized by its own government by a letter of marque to capture enemy shipping for profit during a war and to bring their prizes before a prize court. Some privateering vessels were owned partly or even

wholly by governments or princes. Privateering was a different practice from pirates who would attack all vessels at all times and simply take ship, cargo, and crew just like that. Privateering was abolished from international maritime law by the Paris declaration of 1856.¹⁸

Figure 1

On 4 October 1769 the Danish ship 'Rigernes Ønske' of Copenhagen (in the middle) was seized by an Algerian settee armed with ten guns (to the right). The Danish captives were transferred to the Admiral's xebec (to the left) which took them to Algiers a month later. Contemporary drawing by Christian Børs who was among the captivated. (Bergen Maritime Museum).

The most important base for the privateers was Algiers, but privateering expeditions were also equipped in the ports of Morocco, Tunisia, and Tripoli. The Strait of Gibraltar and the Sicily Channel, which are ten and one hundred-and-forty kilometres wide respectively, were the most frequently used hunting grounds.

On the other hand, the narrowness of the Strait of Gibraltar meant that in 1796, for instance, the Danish consul Lynch in Gibraltar could send a small boat out west in order to warn Danish shipping entering the Mediterranean that the prince of Algiers had started, in spite of the peace treaty, to seize Danish ships. The Swedes, it can be added, warned their shipping in the same way.¹⁹

Ships which were not bound for the Mediterranean were instructed to keep at safe distance from the danger. Thus the West India and Guinea Company's

¹⁸ Montmorency 1976, 258-259.

¹⁹ Danish National Archives, Board of Commerce, box 1063, Royal resolution of 23 November 1796; Olán 1921, 151.

commanders had orders to steer a course west of the Canary Islands so as not to come into sight of these islands and thereby “risk to meet the Turks who often cruise in those waters”; the same held true with regard to the Cape Verde Islands.²⁰ The ships’ articles of the Asiatic Company likewise stated that everybody onboard the large India-men and China-men should be prepared to defend the ship against the Barbary privateers and be ready to die if necessary. Even the ship’s chaplain onboard the ‘Kronprinsen’ en route from Copenhagen to Tranquebar in India in June 1709 had to participate in preparations for defence when a privateer approached.²¹

As a rule privateers operated first and foremost from April to October, as they wintered in harbour for the rest of the year, as did much European shipping. Most seizures took place in the Mediterranean or within a semicircle within Cape Finisterre, the Azores, and the Canaries. The privateers often lay waiting near the ports, but sometimes they operated instead on the open sea, even as far away as the fishing grounds off Newfoundland. Two or three vessels would operate together and normally only attack weak opponents such as fishing boats or other small vessels. The privateers, on the other hand, were characterized by being fast sailing and effective ships equipped with many sails, much armour, and large crews.²²

The size of the total privateering fleet is not known. But the Moroccans, for instance, would have as a rule a fleet of only twelve large and small vessels. Thus, in 1766, they had four frigates armed with sixteen to forty-five cannons and 130 to 330 men, three xebecs with twelve to sixteen guns and 120 to 126 men, as well as three gallions with four to eight guns and 80 to 120 men.²³

Traditionally it has been supposed that the privateering business and slavery were essential elements of the economy of the Barbary States, and that the total number of enslaved Europeans was a little higher than one million.²⁴ It has been demonstrated, however, that this was not the case,²⁵ even though 20,000 Christians were kept as slaves in Algeria alone between 1621 and 1627, while the number was a little more than 36,000 in all Barbary together in 1680.²⁶ The latest estimate is that around 180,000 persons were enslaved during the golden days of the corsairs, namely from 1574 to 1644.²⁷ In the eighteenth century, the

number of Christian slaves in Algeria had been reduced to 2,000-3,000, and in the early nineteenth century it was only 1,200.²⁸

Ransom Money

An important purpose behind making Christian sailors captives was the possibility of obtaining ransom money from their homes. Therefore, slaves were allowed to write home to their families or authorities and in some instances a few selected slaves were allowed to go home in order to give information about the prisoners, their harsh conditions, and the possibilities for ransoming them. Letters from slaves can be found scattered in Danish and German archives.²⁹

For very long it was up to family and friends to raise the often very large amounts of money necessary to ransom their loved ones from slavery. In many instances, nevertheless, they succeeded, often after having raised a collection in the churches. Severe problems remained, however, in having the money transferred safely to Africa and in seeing to it that the right persons were ransomed. Instead of such individual actions it was realized that it would be much more expedient if a more general and coordinated effort could be established.

Through the 1620s sporadic collections of ransom money had been arranged by Danish authorities. But on 2 August 1630, the King and his Council decided that 20,000 rix-dollars should be used for ransoming Danish prisoners from the Barbary States. The large sum turned out, however, to be insufficient to ransom all slaves, so extra money still had to be collected in the early 1640s.³⁰

Seventy of the prisoners taken at Heimaey were still alive in Algeria in 1635 – half of them were ransomed and came home in the summer of 1637, the rest never returned and we do not know their fate.³¹ It must be supposed, however, that some may have escaped, some have converted to Islam, some have been exchanged for Moslems captured by Christian powers, some may have been ransomed by other Europeans, and some have arranged for their own release.³²

In the late seventeenth century, ransom money had become ordinary alms to be asked for in Denmark, either by relatives of slaves or by general collections in the churches. In order to arouse pity in the churchgoers wooden figurines of sailors in chains were exhibited at the church doors.³³

Algerian sea pass issued on 5 January 1781 for the ship 'de Friede' of Bergen, burthen 67 lasts, commanded by Hans Ellertsen, and bound for Saint Croix in the Danish West Indies. The size of the parchment is 30x40 cm. It is written on the sea pass that the shipowner had taken his oath that vessel and cargo was Danish property. The top section was cut off along the wavy line. (Danish National Archives)

An addition to the church collections were the small amounts of money which were provided by the shipmasters' associations in Bergen and Copenhagen.³⁴ From 1653 and 1707, respectively, every shipmaster and mate paid a small part of their wages, so-called ransom money, to help free Danish sailors from slavery in the Barbary States. From 1715 the money was administered by

³⁴ Hassø 1934, 15, 52, 81-83, 122.

the Danish envoy in Brussels who had, before that, been responsible for recovering Danish ships captured by European privateers.³⁵

At that time a number of ships under the Danish flag were seized. The large armoured frigate 'St. Christopher' from Bergen with a crew of forty men was taken when it was homebound from Leghorn in June 1706.³⁶ On this occasion the King allowed a collection both in the churches and at peoples' homes. The revenues were to be administered by the municipal authorities in Bergen to ransom the ship's officers and as many ordinary sailors as possible. In August 1708, the 'Fortuna' of Drammen was seized en route to Cadiz and taken to Algeria, and in August 1712 two more ships under Danish colours were seized on their way home from Portugal and Spain. Supplications from relatives to the King resulted in a comprehensive collection all over his realm.

The results were not satisfactory, as all slaves could not be ransomed. For instance twenty-nine out of the forty men from 'St. Christopher' were still held as slaves in 1714, and had been so for eight years.

Some prisoners, most often masters or mates, succeeded in freeing themselves. Sometimes they borrowed the necessary ransom money from their shipowners or others at home, but often these sums were so high that they could not meet their obligations once they had come back home and had to spend the rest of their lives in poverty.³⁷

The Slave Fund, 1715

In 1715, the slave issue had become a matter of urgency, as more than eighty of the King's subjects were held as prisoners in Algeria alone.³⁸ The King issued therefore, on 12 April 1715, three ordinances.³⁹ The first one introduced a duty on all shipping to France, Spain, England, Portugal, and Holland, namely three shillings per commercial last of burthen.⁴⁰ The second ordinance decreed that on two Sundays every year collections should be held in all churches, after the pastors had aroused Christian pity in their flocks. The collected money was to be sent to the Slave Fund in Copenhagen which was established by the third ordinance. The Fund should also receive the afore-mentioned money from the shipmasters' associations, which was extended, in 1716, to all ports and fixed at two shillings per rix-dollar for shipmasters and mates and at one for ordinary

⁴⁰ Danish ships were measured in commercial lasts which roughly equalled a carrying capacity of 2.6 tons. Cf. Møller 1974; Müller 2004, 242.

sailors – respectively two and one percent, that is.⁴¹ Thus, the collections contributed about one half of the money in the Slave Fund, while money from sailors and ships made up the other half.⁴² (By decree of 26 November 1768, the duty on burthen was abolished, and afterwards only crew-members on vessels with an Algerian sea pass had to pay the so-called ransom money. This had to be paid until 1827).⁴³

Appointed as members of the Slave Fund Commission were a bishop and two competent merchants.⁴⁴ The Commission had to find the best ways of ransoming slaves, if necessary after having consulted experts in this field. First of all the commissioners should ransom slaves from the Barbary States, and keep accounts of the Slave Fund as well as of the numbers and names of the ransomed slaves. The funds might be increased a little by trying to have ransom money paid for the Turk prisoners who were held in Copenhagen. Finally, the Commission was ordered to present an annual report on their activities and the results.

Ordinary marine insurance was not relevant with regard to the odious practice of Moslem privateering. First, it could not be considered as piracy because the privateers were authorized by their governments, and second, there was no war declared against the North Africans. As time went on, special slave insurance was developed, but it was not in common use in Scandinavia. A few shipmasters and mates were, nevertheless, insured in order to make sure that a certain amount of ransom money would be paid out.⁴⁵

Ransom money fluctuated quite a lot according to circumstances. A shipmaster cost, for example, more than an ordinary sailor, and the amounts also changed over time.⁴⁶ During the 1630s, ransom money is known to have fluctuated from less than one hundred rix-dollars to almost six hundred rix-dollars.⁴⁷ In 1714, two shipmasters ransomed themselves at 3,200 and 2,350 rix-dollars each. At the same time a sailor was ransomed for a little less than four hundred rix-dollars, but even that was a sum much larger than what an ordinary family could afford.⁴⁸ From 1715 to 1736, the Slave Fund Commission ransomed 163

Danish subjects for 154,649 rix-dollars or 949 rix-dollars on average, an average which was valid until the Slave Fund was closed down in 1754.⁴⁹ When, on the other hand, a Danish man-of-war was lying in the roads of Algiers for instance, the prices were drastically reduced. Thus, the 'Delmenhorst' ransomed prisoners at eighty rix-dollars per person in 1746, and nine years later the 'Fyen' had a slave at only thirty-nine rix-dollars.⁵⁰

We do not know how many of the Danish King's subjects were slaves in the Barbary States during the centuries for shorter or longer periods. Even though the number of seizures declined after the middle of the eighteenth century, the number of enslaved Danes probably amounted to thousands. We do know that from 1716 to 1754, the Barbary privateers seized no less than nineteen Danish vessels with 208 men onboard, and when the *Staten van Holland*, in 1682, ransomed 178 slaves in Algeria who had been engaged on Dutch ships, seven Danes were among the liberated.⁵¹ The Danish Slave Fund Commission, nevertheless, would not ransom Danish subjects who had been engaged on foreign vessels.⁵² The commissioners reported proudly, in 1736, that at that time no Dane was held prisoner in the Barbary States.⁵³

Very soon after its establishment the Slave Fund had engaged local representatives in the financial centres of Hamburg and Amsterdam, as well as the merchant Johannes Pommer in Venice, from where he managed the ransoming business on behalf of the Danes. Between 1715 and 1753 the Fund and its representatives ransomed a total of 224 slaves. Before 1746 fourteen ships were captured and 180 slaves ransomed, i.e. on average 0.5 ships and 6.0 ransomed slaves per year. From 1748 to 1754 it amounted to five seized ships and 44 ransomed seamen, i.e. on average 0.7 and 6.3 respectively per year.⁵⁴ Even though more ships were seized and more sailors were to be ransomed, the Algerian sea passes were a success as the trade and shipping activities under the Danish colours in the Mediterranean increased at an even higher rate, as demonstrated for instance in the Sound Toll Registers.⁵⁵

It must be added briefly that many other privateers operated in European waters, yet without taking sailors as slaves. Especially ill-famed were the Maltese Knights and the corsairs of Zeeland during the War of the Spanish Succes-

Treaties, 1746-1845

All Christian seafaring nations experienced the same problems with the Barbary privateers, even great maritime powers such as Britain, the Netherlands, and France. Even though several authors recommended common action against the Moslems, no such action was taken.⁵⁷ So, the seafaring nations had to cope with the problem on an individual basis – and ended by signing peace treaties with the Barbary States. These, except for Morocco, were not states as such, however, but peripheral territories under the control of the Ottoman Empire. It may seem a little strange to sign a peace treaty in such cases where no war had been declared, but according to Islamic law there was by definition an eternal war going on against the Christians.

⁵⁶ Feldbæk 1997.

⁵⁷ E.g. *Project* 1721; Herrmann 1815.

The peace treaties were as a rule made after the same pattern. The Europeans promised to deliver once-and-for-all presents as well as annual presents typically consisting first and foremost of bullion, weapons, ammunition, and pretiosa. Even though this was very expensive, it was considered less expensive than the alternative which would be protection by men-of-war of the merchantmen in convoys, a practice which was rather slow and complicated to organize.

In return for the presents the Christian mercantile shipping would not be disturbed by the Moslem privateers. This would be secured by providing the merchantmen with a special kind of sea passports which were cut into two pieces, of which the upper part was sent to the Barbary States while the large lower part with the text, which was in a European language, was to be carried by the shipmaster.⁵⁸ As neither privateers nor European seamen were able to read or understand the spoken language of their counterparts they simply produced their own part of the passport – and if the parts fitted together the European ship should be allowed to pass on without any hindrance. The Christian seafaring nations made use of individual wave lines to cut their passes.⁵⁹

Entering into a treaty with the Dey of Algiers was discussed in Denmark for a long time, especially after Sweden had concluded such a treaty in 1729.⁶⁰ The Danish Slave Fund Commission gave their opinion on the matter, in 1736, and suggested to the King a draft which was very much like the text of the peace treaty which was – after futile efforts at contact in 1738 and 1742 – signed by Denmark and Algeria on 10 August 1746.⁶¹

In the treaty, King Frederik the Fourth and Dey Ibrahim Pasha assure that they will live in peace with each other for ever, and that “all ships, be they small or large, should never in any way cause each other any harm or damage” (paragraph one);⁶² the ships must not delay each other (paragraph three); and “when an Algerian privateer meets one of His Majesty’s subjects’ ships, the Algerians may only approach the ship with a barge manned with two persons in addition to the bargemen, no more than two persons are allowed onboard the

⁵⁸ Foreign sea passes are shown e.g. in Müller 2004, 145; Bowen 1926, 189; Granville 1924, 32.

⁶² Danish National Archives, Treaty Collection, Original treaties in Turkish, Danish, and French; printed edition published in Danish and German as an appendix to *Kong Friderich den Femtes Forordninger 1746* 1748; abridged version in Reedtz 1826, 197-198; translation in Wandel 1919, 10-11. This treaty is identical with the treaty of 22 January 1752 with Tripoli, except for an insignificant difference in paragraph 9, cf. Udenrigsministeriet 1882, 22-29.

Danish ship, and when the shipmaster has produced his passport they must leave the ship immediately, and no merchant vessel must be detained” (paragraph four). No Dane may be “taken, sold, or made a slave” (paragraph twelve). Furthermore, the rights and obligations of Danish consuls and men-of-war are acknowledged (paragraphs fifteen through eighteen). It is also agreed that “no Algerian ship, be it large or small, is allowed to run into sight or enter any port belonging to Denmark, as such might give occasion for misunderstandings” (paragraph eight). Strangely enough, no mention of presents or tribute can be found in the peace treaty, but this must have been an implicit condition. After ratification of the treaty by the Danish King and the Divan, its contents were published in Denmark by proclamation of 12 January 1747.⁶³

The Danish treaty was verbally correspondent with the Swedish one from 1729; only two paragraphs differ, as paragraphs eight and twelve are not to be found in the Swedish treaty.⁶⁴ The Dutch-Algerian treaty of 18 June 1712 is also very much like the Danish and Swedish ones; several paragraphs have identical wording.⁶⁵ The Dutch tradition dates back to the first treaty with Constantinople in 1660, in which dispositions to many of the later provisions can be found. These were developed in the following treaties between the Netherlands and the Barbary States, culminating in the treaty with Algeria dated 30 April 1629, the content of which is identical with the 1712 treaty.⁶⁶ The French King signed a treaty with Algeria for the first time in 1619, the English in 1662, and the German Kaiser in 1727.⁶⁷

The same provisions as in the Danish treaty of 1746 were reiterated almost unchanged in the other treaties which were signed by Denmark and the Barbary States: namely Tunisia on 8 December 1751, Tripoli on 22 January 1752, Morocco on 18 June 1753, the Sublime Porte in Constantinople on 14 October 1756, Morocco again on 25 July 1767, Algeria on 16 May 1772, and Tripoli in 1816, 1824 and 1826 – until the last Danish obligation to pay tribute was repealed by treaty with Morocco dated 5 April 1845.⁶⁸

The Danish reason for signing these slightly ignominious treaties was mainly economic, namely the important shipping and trade under the Danish flag. However, we should also be aware that these treaties ensured absolute safety for all Danish sailors for the future. That this was also an important

⁶³ Schou 1777-1850, 12 January 1747.

⁶⁴ Even though paragraph 8 in the Dutch-Algerian treaty of 26 March 1662 says that both Danish and Swedish sailors onboard Dutch ships might be enslaved, according to Dan 1684, 102.

⁶⁵ Cau 1725, 449-452; a brief mention can be found in Sandbergen 1931, 155-156.

⁶⁶ Vries 1684, 19-26, 84-86, 99-103, 134-141.

⁶⁷ Reftelius 1739, 464-465.

⁶⁸ Udenrigsministeriet 1882 passim; Udenrigsministeriet 1877, passim. The most important Dutch follow-up treaties were from 1726, 1757, 1794, and 1816, while the Swedish were from 1736, 1741, 1758, 1763, and 1771.

reason to sign these treaties can be clearly read from the petition of the Slave Fund to begin peace negotiations with the Barbary States. Here not one economic reason is stated but instead the authors elaborate on the misery of the Christian slaves in Northern Africa.⁶⁹ However, this did not always ensure full security. On three occasions Barbary States violated the treaties and began to seize Danish ships: Algeria 1769-1772, Tripoli 1796-1797, and Tunisia 1800-1802. Denmark reacted by sending out squadrons of fifteen, three, and eighteen men-of-war respectively to demonstrate naval force and strength of will, but it turned out to be almost impossible to force the Barbary States. Instead the Danes had to accept new economic demands from the Moslems, a solution to the conflicts which was still much cheaper than sending out sufficient men-of-war to protect the Danish shipping by convoying the merchantmen.⁷⁰ Thus, in the 1790s it was estimated that the value of the tributes made up only fifteen percent of the net earnings of the Mediterranean trade and shipping under the Danish flag.⁷¹ Considerable additional expenditures by the foreign service and the navy must not be forgotten, however. A very important factor in producing human security was the installation of Danish consuls in the Barbary States: 1747 in Algiers, 1752 in Tunisia and Tripoli, and 1753 in Morocco.⁷²

Another matter for concern was the fact that not a few prisoners converted and abandoned their Christian faith for the sake of Islam, either for practical reasons or from conviction. This, in addition to the hardships of the captured countrymen and the need to have the sailors back to man the Danish fleet, was also an important driving force behind the ransoming efforts.⁷³

It is strange that none of the Danish treaties mention explicitly the introduction of so-called Turkish or Algerian sea passes. Probably it has been implied that this special kind of passport, which was already well known, should be made use of. This was suggested in 1736 by the Slave Fund Commission.⁷⁴

The Danish Vice Consul in Morocco could state that in the 1760s the sea pass system was working well. When a privateer captain was to depart he picked up from every consul a sea pass (i.e. upper part only) for which he had to make a receipt, and he even received a small gift "in order to prevent him from mistreating ships of those nations at sea".⁷⁵

⁷⁴ Wandel 1919, 6; Müller 2004, 144; Eck 1943, 190-191.

⁷⁵ Høst 1779, 179.

The sea pass system did provide security as is demonstrated from the following example.⁷⁶ On 30 May 1749, a ship under the Danish colours bound for Marseille was seized near Cape Finisterre by a xebec from Tetuan (a Moroccan port just east of the Gibraltar Strait), because Denmark had not signed a peace treaty with Morocco. The ten Danes were taken prisoners onboard the xebec. The next day, however,

our xebec met an English ship from where the shipmaster was ordered to come onboard to us to show his English sea pass. When he had done that the answer to him was: We have peace together. Thereupon he went back to his own ship again to proceed his voyage.

The Danes were taken ashore and enslaved.

Algerian Sea Pass Protocols, 1747-1848

Fulfilment of the Barbaresque treaties was rather expensive for the Danish government, but it was considered so advantageous after all that Danish authorities made every effort to secure that Algerian sea passes were not abused. A considerable number of regulations were published in Denmark in order to make sure that the authorities could supervise and control the issue of passes etc.

On 1 May 1747, the royal ordinance concerning Algerian sea passes was given.⁷⁷ It was probably inspired from two Dutch placards of 1713 and 1715, which together comprised the same provisions as the Danish ordinance, and which had their roots in the States-General's ordinances of 1623 and 1625 concerning Turkish sea passports. Another obvious source of inspiration was the Swedish ordinance of 12 January 1730, as the Danish and Swedish texts are very much concordant.⁷⁸

The Danish ordinance prescribed that the shipowners should take their oath and produce documents which proved to the municipal authorities that the ship belonged to subjects of the Danish King and that it was equipped at the expense of Danes. Furthermore, the shipmaster had to take an oath that he would not in any way abuse the sea pass. Only then could the Board of Commerce in Copenhagen issue an Algerian sea pass. It was written on a large, beautiful parchment form. The sea pass was valid for only one voyage, and the shipmaster had to return it to the Danish authorities immediately upon his return. The Board of Commerce's supervision was carried out by means of protocols,

called the Algerian Sea Pass Protocols, in which information about all Algerian sea passes that had been issued were registered.

Figure 4

Title page of the printed version of the royal Danish ordinance of 1 May 1747 concerning Algerian sea passes. It is written on it that the text has been read at the town hall to the burghers present on 12 May 1747. The name of the town is unknown. (Danish National Archives)

At least from March 1748, it was compulsory for all ships under the Danish colours destined to ports beyond Cape Finisterre to carry an Algerian sea pass. This held true for voyages to Spain, Portugal, all ports in the Mediterranean, as well as to Africa, America, and Asia.⁷⁹

The price of a sea pass was considered rather high by the shipowners. They had to pay fifty rix-dollars to the Slave Fund for having an Algerian sea pass

⁷⁹ For the following, see Fogtmann 1786-1854, passim; and Schou 1777-1850, passim. Cf. Link 1959, 140.

issued, plus two rix-dollars for the form itself, and in many cases also perquisites to the municipal authorities. As from 1783, payment to the Slave Fund was instead regulated according to the burthen of the vessel.

When France, in 1830, conquered Algeria the situation with regard to privateering in the Mediterranean changed completely, because Tunisia and Morocco also committed themselves to stopping their privateering business at once. Danish shipowners now wished to have the obligation to carry an Algerian sea pass abolished. The Board of Commerce agreed, whereas the Africa Consular Directorate found that Denmark still had to respect obligations with regard to sea passes stipulated in the treaty with Morocco. Thus, a new Danish ordinance dated 9 July 1831 maintained the sea pass obligation but reduced to one third the fees to be paid.

The shipowners were not satisfied and repeated their dissatisfaction, supported by the Board of Commerce. Only when it could be shown, in 1840, that only Sweden and to some degree Norway⁸⁰ maintained the sea pass obligation – while it had become voluntary in Russia, England, the Netherlands, and Belgium, and had been abolished in Prussia and the Hanseatic Towns – could the Danish Department of Foreign Affairs (which had taken over the issue after the Africa Consular Directorate) and the Board of Finance be persuaded, but only insofar as it should hereafter be voluntary for Danish shipping to take out an Algerian sea pass.⁸¹ The result was a royal ordinance of 1 July 1840 in accordance with this cautious point of view. The year after, Sweden also adjusted its sea pass rules.⁸²

The effect came immediately. While 261 Algerian sea passes had been issued in Denmark in 1839, the number was reduced to 149 in 1840, and further to fifty, fifteen, nine and only six in 1844. No Algerian sea pass was issued thereafter.

A sea pass was, as already mentioned, only valid for one voyage. But gradually it was accepted that the ships could sail beyond Cape Finisterre from port to port for up to two years. Thereupon the Danish consul in a foreign port would renew the passport for another two years.⁸³ This was important to the many ships which were engaged in the tramp trade without returning to their home port for years on end. But as soon as such a ship returned to domestic waters, the voyage was considered to be finished and the sea pass had to be returned to Copenhagen.⁸⁴ It was decreed, however, that if this meant delay to

⁸⁰ From 1814, Norway was no longer ruled by the Danish King.

⁸² Krøger 1856, 34-35.

⁸³ Schou 1777-1850, 26 February 1781.

⁸⁴ Schou 1777-1850, 3 July 1793; Fogtmann 1786-1854, 2 October 1802.

the shipping then the old sea pass could be renewed anywhere in the monarchy.⁸⁵

The Board of Commerce's Algerian Sea Pass Protocols are preserved in the Danish National Archives from the period 1747-1848, but with a lacuna from mid-October 1771 to the end of 1777.⁸⁶

The look and layout of the registers changed over time, but the eighteen volumes do contain almost the same kind of information about the individual voyages: 1) passport's serial number, 2) name of shipowner, 3) name of shipmaster, 4) ship's name, 5) burthen, 6) home port, 7) destination, 8) date of oath, 9) date of issue of sea pass, 10) date of return of sea pass, 11) name of person who has returned the passport, 12) any other information. At times there would also be information about the amount paid and whether or not the passport had been renewed.

The Algerian sea pass form which was handed over to the shipmaster was sealed by the Board of Commerce and signed by the Board members. The document was in Danish and guaranteed that the ship was Danish property; furthermore it mentioned the ship's name, home port, and burthen, as well as the destination and the shipmaster's name.

Research Potential

The research potential of the Algerian Sea Pass Protocols shall not be discussed in detail here. Suffice it to mention that the protocols constitute an unrivalled source material for mapping all long-distance shipping under the Danish colours in the second half of the eighteenth century and the early nineteenth century. The Algerian Sea Pass Protocols have been made use of in mapping shipping to the Mediterranean (by Dan H. Andersen),⁸⁷ and to Guinea and the West Indies (by Erik Gøbel).⁸⁸ With regard to India shipping the sea pass protocols have just provided supplementary information compared to other sources.⁸⁹ The completeness and reliability of information in the Algerian Sea Pass Protocols have been tested and confirmed in different ways.⁹⁰

Information from the Algerian Sea Pass Protocols can be used both for mapping general trends over time and for following shipping from a single port or even individual shipowners or a single master – all with regard to chronology, number of voyages, burthens, destinations, etc.

⁸⁵ Schou 1777-1850, 1 July 1803 and 9 April 1810.

⁸⁶ It is known that in that period too, a considerable number of Algerian sea passes were issued. One volume of Algerian Sea Pass Protocols has been lost.

shipping, as well as the contributions by the different parts of the Danish King's dominions.⁹²

Epilogue

Sailors and ships were exposed to many dangers at sea. Sickness and death were difficult to prevent; shipwreck or general average⁹³ were also inevitable in many cases, but the economic consequences could be modified by means of maritime insurance; privateers, or even pirates, were also a nuisance to shipping.

Privateers from the Barbary States used for centuries to be a threat to European shipping and to the human security of Christian sailors, including many of the Danish King's subjects. The structure of the international political and economic system was therefore important as a decisive background or framework.

In the beginning of this article it was asked how the Kingdom of Denmark produced extraterritorial security against these threats from the fringe of the "Westphalian System". As we have seen, it was with a mixture of measures that the Kingdom tried over the centuries to produce this security for Danish seamen. The most effective way of ensuring respect for its subjects was the signing of tribute-based peace treaties between Denmark and the Barbary States in the mid-eighteenth century. Both parties won by agreeing upon this system and they saw to it that the treaties were usually respected, apart from a few brief periods of disagreement and hostility. After 1830, the threat from the Barbary States faded away and the passports were no longer necessary. But from 1747 to 1844 the Danish authorities issued around 28,000 Algerian sea passes (i.e. almost 300 per year on average) which produced security for hundreds of thousands of Danish sailors.

Many peculiarities of a modern understanding of "Human Security" can be found in the examples presented. We find diplomacy, military intervention, ransoming and the payment of tributes. At the centre of all these measures was mostly the ultimate aim of reducing suffering of individuals. An important difference stands out between our modern concept and the ways of production of this sort of security for the individuals of the Early Modern Era, which is that the Danish King acted only for his own subjects and not for the individuals

⁹² Danish National Archives, Kommercekollegiet, Algierske søpasprotokoller no. 1188 (1788), no. 1850 (1798), and no. 1852 (1806).

⁹³ "General average" is a term in marine insurance for the adjustment of a loss when cargo on board a ship belonging to one or more owners has been sacrificed for the safety of the whole, whereby the amount of the loss is shared by all who have shipped cargo in the vessel, for instance if the deck cargo of a ship has had to be jettisoned to safeguard the ship in rough weather.

of other states. Yet, it was the individual's security on which the emphasis was already placed centuries ago, not the security of the state. Both were seen as inextricably linked and the state was ready to devote quite substantial resources to reducing the threat to its subjects. In opposition to a state-centred viewpoint, we can clearly identify a striving towards "human security" in many actions of an absolute monarchy of the so-called classical "Westphalian System".⁹⁴ For our modern understanding it may be helpful therefore to take better into consideration the "longue durée" of "human security" and to see it as a result of a centuries-old evolution, which can often be found or even measured throughout history in specific examples, of which one was presented here.
